ATHARV

SCAN & LAB PVT. LTD.

Name : Master MOHD SHADIK	UHID : AH012044
Age : 13 Y/Male	Consultant : Dr. ZAHEER AHMAD (PGI)
Address :	Date : 16-09-2021

CECT LOWER ABDOMEN

Study protocol:-

Sections of appropriate thickness were done at adequate intervals in state of art multi detector CT scanner so as to cover the entire region from mid pole of kidneys to the pubic symphysis after the administration of oral and I.V. Contrast (non-ionic).

Finding:-

There is dilated appendix with maximum diameter of 18.0mm showing wall thickening with intraluminal hyperdense foci with appendicololith and periappendiceal inflammation in the rectocaecal position.

Multiple subcentimetric clustered mesenteric lymphnodes are seen, largest measuring approximately 9.0mm in short axis diameter.

Adjacent small bowel loops are clustered with subtle interloop free fluid and mild peritoneal thickening.

Rest of the bowel loops are mildly prominent, due to orally ingested water or enterographic solution.

Rest of the colon are grossly normal. Rectum is mildly dilated.

Urinary bladder is normal with clear lumen and smooth thin walls.

Prostate is normal.

OPINION: - CT findings are suggestive of acute appendicitis with mild periappendiceal inflammatory changes and appendicololith with mild free fluid without any obvious aspirable or drainable collection or inflammatory mass formation along with small locoregional reactive post infective lymphadenopathy.

Please correlate clinically.
